

Full Stack Engineer

Overview:

Gamiphy is a platform for businesses to engage, acquire, and retain more clients through applying gamification. We provide businesses and brands with gamified loyalty programs, branded games, team motivation tools, and key analytics that are necessary for making better business decisions.

Gamiphy is growing rapidly and is looking for a **Full Stack Engineer** to take over the following responsibilities:

Responsibilities

- Design, develop, and maintain integration flows using an array of different platforms, APIs, databases, protocols, and data formats
- Integrating new platforms and complex systems (Mainly e-commerce platforms like Shopify, Vtex, etc...).
- Determining that the outcome of the integration has met the organization's needs
- Educating the organization and clients about the system and integration procedure, its implementation, and its use.
- Handling a broad range of software and other programming tasks to ensure that their systems integrations are functional.

- Defining integration strategies and methods and then planning them in accordance with established deadlines and time schedules
- Creating and providing technical documentation that explains upcoming or existing integrations to non-technical individuals.

Requirements:

- In-depth knowledge of NodeJS, ExpressJS or Restify
- Ability to bind UI elements to JavaScript object models
- Experience creating RESTful services with Node.js
- Proficiency in OOP and database concepts
- Proven experience in front & back-end development
- Knowledge of modern frameworks and design patterns
- Ability to create Unit and Integration tests to ensure the quality of code
- Strong problem-solving skills
- Good communication skills
- Strong analytical thinking
- Self-motivated
- Strong will and discipline

If you are interested in this position and you have the required qualifications, send your resume to careers@gamiphy.co with the subject line: Full Stack Engineer, "your name".
